RENEW Wisconsin Congratulates Dairyland Power Cooperative & Ranger Power for Solar Power Partnership

Today at their headquarters in La Crosse, Dairyland Power Cooperative announced that it will be purchasing electricity from a new major Wisconsin-based solar energy facility being developed by Ranger Power.

The partnership involves a 149 megawatt solar power facility called Badger State Solar which is planned to be located in Jefferson County, Wisconsin. Ranger Power is planning to develop, own, and operate the project. Dairyland Power Cooperative will purchase all the electricity generated from the project through a long-term power purchase agreement.

The project will produce enough electricity to provide the equivalent annual needs of about 20,000 homes. If all approvals are granted from local and state permitting processes, construction would begin in 2020 and operation would commence in 2022.

RENEW Wisconsin's Executive Director Tyler Huebner said, "Today's announcement shows that solar power has become a cost-effective resource for Wisconsin's major power providers such as Dairyland Power. By committing to this solar project which will be built right here in Wisconsin, Dairyland will meet its goals of safe, reliable, affordable, and an increasingly sustainable and diversified energy supply. We congratulate Dairyland Power Cooperative and Ranger Power on this historic announcement!"

By RENEW Wisconsin's count, the state had about 103 megawatts of solar at year-end 2018, with Dairyland Power Cooperative responsible for about 20 megawatts, already placing it as the leader in the state for the amount of solar installed to-date. This project, along with a number of additional major solar projects, will dramatically increase the amount of solar energy produced in Wisconsin in the next five years.

More information about the project is included in attachments.

About RENEW Wisconsin

RENEW Wisconsin is a nonprofit organization which promotes renewable energy in Wisconsin. We work on policies and programs that support solar power, wind power, biogas, local hydropower, geothermal energy, and electric vehicles in Wisconsin. More information is available on RENEW's website: <http://www.renewwisconsin.org/>.
