Statement: Senate introduces Clean Economy Act

Groundbreaking bill complements House's efforts on climate solutions

WASHINGTON -- A new bill, introduced this week by U.S. Sen. Tom Carper of Delaware and co-sponsored by 33 members, including Sen. Tammy Baldwin, calls for a national goal of net zero emissions of global warming pollution in the United States by midcentury.

If passed into law, the Clean Economy Act of 2020 would require the Environmental Protection Agency to create a plan, using existing authorities, to reduce greenhouse gas emissions to net zero by 2050. This date is in line with the deadline the-world's top-climate scientists have given in order to keep global warming below 1.5 Celsius and avert the worst impacts of climate change.

Megan Severson, state director for Wisconsin Environment, issued the following statement:

"As global warming pollution reaches new heights, our federal leaders must follow the lead of states across the nation who have made climate solutions a top priority, and they must do it quickly. We applaud Sen. Baldwin for cosponsoring and supporting the Clean Economy Act, which will put the American government's might behind the great work that's being done in states across the country. Record-breaking extreme weather is devastating families and communities throughout Wisconsin. Before it's too late, members of Congress - including Sen. Ron Johnson - must step up and counter the existential threat of climate change by joining Sen. Carper in clearly supporting the essential goal of reaching net zero emissions by 2050."

###

Wisconsin Environment is dedicated to protecting our water, air and open spaces. We investigate problems, craft solutions, educate the public and decision-makers, and help the public make their voices heard in local, state and national debates over the quality of our environment and our lives.
